FEEDING HAY

EXCEL NUGGETS

NATURE SNACKS

FRESH GREENS

FRESH WATER

Step 1 Excel Feeding Hay

Hay is vital for dental health – We grow our hay in the heart of Yorkshire, where it is barn dried and dust extracted to deliver the sweet smell and green colour which is characteristic of the best quality hay.

Step 2 Excel Tasty Nuggets

Nuggets prevent selective feeding and help maintain digestive health, with prebiotics and an ideal blend of fibre. Research has shown that muesli-style foods lead to selective feeding. This can result in an unbalanced diet.

Step 3 Snacks

Snacks provide additional nourishment and promote emotional health by encouraging foraging. They're idea for mixing through Excel Feeding Hay.

Step 4 & 5 Fresh Greens & Fresh Water

Feed a range of fresh greens high in vitamin c to add variety. Ensure fresh water is always available.
